NEW! PPE REQUEST & VACCINE MODULE RELEASED

February 2021

In preparation for the rollout of COVID and influenza vaccines, a new vaccination module has been released in Capacity Tracker.

Capacity Tracker is a free, secure online communication tool capturing real-time General Practice (GP) and Residential Aged Care Facility (RACF) workforce and resource data, including:

- Vaccine stocks available by location
- Authorised practices and immunisation locations
- Immunisers available by location
- Residential Aged Care Facility staff and patients vaccinated (and declining to be vaccinated)

Awareness of vaccine supply, resourcing issues, and visibility of the location of authorised immunisers, enables effective PHN support by redistributing vaccines (if required), promoting locations where vaccines are available, tailoring communications in response to vaccination progress across the region, and advocating for General Practices, Residential Aged Care Facilities and the community.
