

WEBINARS & ECHO HUBS: Medicinal Cannabis – Chronic Pain, Dependence & Clinical Considerations

PHN EDUCATION SESSION

WEBINAR: Medicinal Cannabis has transitioned into clinical practice settings rapidly. In parallel, there is ongoing research into efficacy and safety across a broad range of indications. The medicinal cannabis webinar will include presenters with a diverse range of clinical experience, including an addiction specialist, pharmacist, pain specialist, and paediatrician/clinical pharmacologist.

ECHO HUB: Project ECHO is a free, interactive, online and evidence-based model which places healthcare providers from diverse settings in direct contact with subject matter experts, empowering them to provide best practice care for their local communities. Participation in ECHO involves discussion of de-identified cases with colleagues and with the expert panel. Please click [here](#) and [here](#) for more information about Project Echo. To allow discussion of de-identified cases, we do require participants to present cases. To present a case, simply **complete and the attached form**. **NB: This is NOT a recording that is issued after the event! This needs LIVE attendance.**

WHO: GPs, Nurses, Mental Health Providers & Allied Health Professionals
