

Psychosis in Young Persons

(Under 18 years of age)

PHN / CCLHD
EDUCATION SESSION

The clinical significance and prognostic value for diagnosing psychosis in young children is less established than that for adults. Assessment of psychosis in children can seem complex and may not often meet the threshold for categorical DSM diagnoses. This can sometimes be challenging for non-psychiatry specialities.

This Webinar aims to increase confidence in assessment of psychosis and provide information around psychoeducation for families, that will help with overall outcomes for the young person and their loved ones.

LEARNING OUTCOMES:

- Identifying the early red flags of psychosis
- Identify differential diagnosis of psychosis
- Outline biomedical investigations for psychosis
- Identify prodromal stages of psychosis
- Outline ongoing management strategies for psychosis in young persons

SPEAKER: Dr Jina Jose, Consultant Psychiatrist, Child and Adolescent Mental Health (CAMHS), Perinatal Infant Mental Health Service and Whole of Family Services across Central Coast and Hunter New England regions.

WHO: General Practitioners and GP Registrars

WHEN: Tuesday 7th March 2023, 6:30 pm – 7:30 pm
