

SafeScript NSW (Real Time Prescription Monitoring system) is coming

PHN EDUCATION SESSION

SafeScript NSW provides prescribers and pharmacists with real-time information about a patient's prescribing and dispensing history for certain high-risk medicines, known as monitored medicines. This information helps to improve clinical decision making and help keep patients safe.

SafeScript NSW will be available to prescribers and pharmacists in Hunter New England and Central Coast regions from late October. Learn about the benefits of SafeScript NSW and how the system is intended to be used.

After this session, health practitioners will be able to:

- Demonstrate an understanding of what the SafeScript NSW system is, why it is needed and how it will be incorporated into clinical workflow.
- Engage with the SafeScript NSW system to analyse and interpret the patient's history to inform best practice patient outcomes.
- Know where to access point in time and additional resources to inform clinical decision making and improve knowledge and expertise for managing patients using drugs of dependence.

WHO: General Practitioners, Registrars, Pharmacists, Specialists and Practice Managers
