

# The essential role of GP's in early obstetric care

FIRST TRIMESTER SCREENING FOR ANEUPLOIDY AND PREECLAMPSIA,  
IMPLEMENTING THE NATIONAL SAFER BABY BUNDLE STRATEGIES AND  
REFERRAL PATHWAYS

# Aneuploidy screening

## NT scan

- ▶ Risk based screening
- ▶ Should at least be *offered* to **all** women between 11+0 and 13+6
- ▶ Current is gold standard
  - ▶ NT scan + maternal age + serum Bhcg + PAPP-A
  - ▶ Detection rate 90% (FPR 5)
  - ▶ Additional markers: nasal bone, tricuspid valve, DV
    - ▶ Increase detection to 95% (FPR 3)

# Aneuploidy screening NIPT

- ▶ From 10 weeks
- ▶ Self-funded
  - ▶ Between \$300-\$700
- ▶ Through pathology services
  - ▶ Roche (harmony) – counting, inconclusive results++
  - ▶ Natera (panorama) – snp, long turn around
  - ▶ Illumina (generation, nest, percept) – snp. Reliable few inconclusives
- ▶ Placental cell turn over, chromosomes fragment and release short fetal DNA fragments into maternal circulation

# Aneuploidy screening

## NIPT

- ▶ Affected by gestation, maternal BMI, aneuploidy
- ▶ Very high detection rate for T21=99% (FP = 1%)
- ▶ T18=97%, T13=92%, XO=89%, microdeletion=70% (Don't do!)
- ▶ Limitations
  - ▶ Cost, 3% test failure, not diagnostic, limited chromosome testing currently, placental origin, no structural information

# Aneuploidy screening

## Why do a scan?

- ▶ Defects in euploid fetus
  - ▶ Always: acrania, holoprosencephaly, gastroschisis, megacystis, exomphalos, body stalk anomalies
  - ▶ Sometimes: spina bifida, ventriculomegaly, cardiac defect, diaphragmatic hernia, skeletal dysplasia, absent hands/feet
  - ▶ Undetectable (early): agenesis corpus callosum, cerebellar hypoplasia, CCAM, duodenal atresia, hydronephrosis, talipes
- ▶ NT enlargement (particularly  $>3.5\text{mm}$ )
  - ▶ Chromosomal abnormality
  - ▶ Cardiac abnormality
  - ▶ Other structural
  - ▶ Genetic syndromes

# Aneuploidy screening

## Why do a scan?

- ▶ Screening for PET and growth restriction
  - ▶ Uterine artery dopplers, Mean arterial BP, PAPP-A
- ▶ Consider checking the cervix
  - ▶ Women with history of PTB, previous short cervix/suture

# Aneuploidy screening

- ▶ Offer NT scan or NIPT (+scan)
- ▶ Contingent screening
  - ▶ NT result  $>1:50$  = High risk
    - ▶ Should be offered definitive testing (CVS/Amnio)
    - ▶ But consider NIPT
  - ▶ NT result  $1:50-1:1000$  = Intermediate risk
    - ▶ Offer NIPT
    - ▶ Normal morphology scan probably halves risk

# PET screening

## Why do we need it?

- ▶ 2-5% pregnancies
- ▶ Maternal complications
  - ▶ Eclampsia, DIC, stroke, blindness, renal and hepatic failure
  - ▶ Doubling lifetime risk CVD
- ▶ Fetal/neonatal complications
  - ▶ 1/3 will require delivery <37 weeks
  - ▶ Death, haemorrhage, seizures, respiratory difficulties, retinopathy, prolonged hospital stay
  - ▶ Long term risks – CP, Increased BMI, CVD, diabetes

swelling

protein  
in the urine

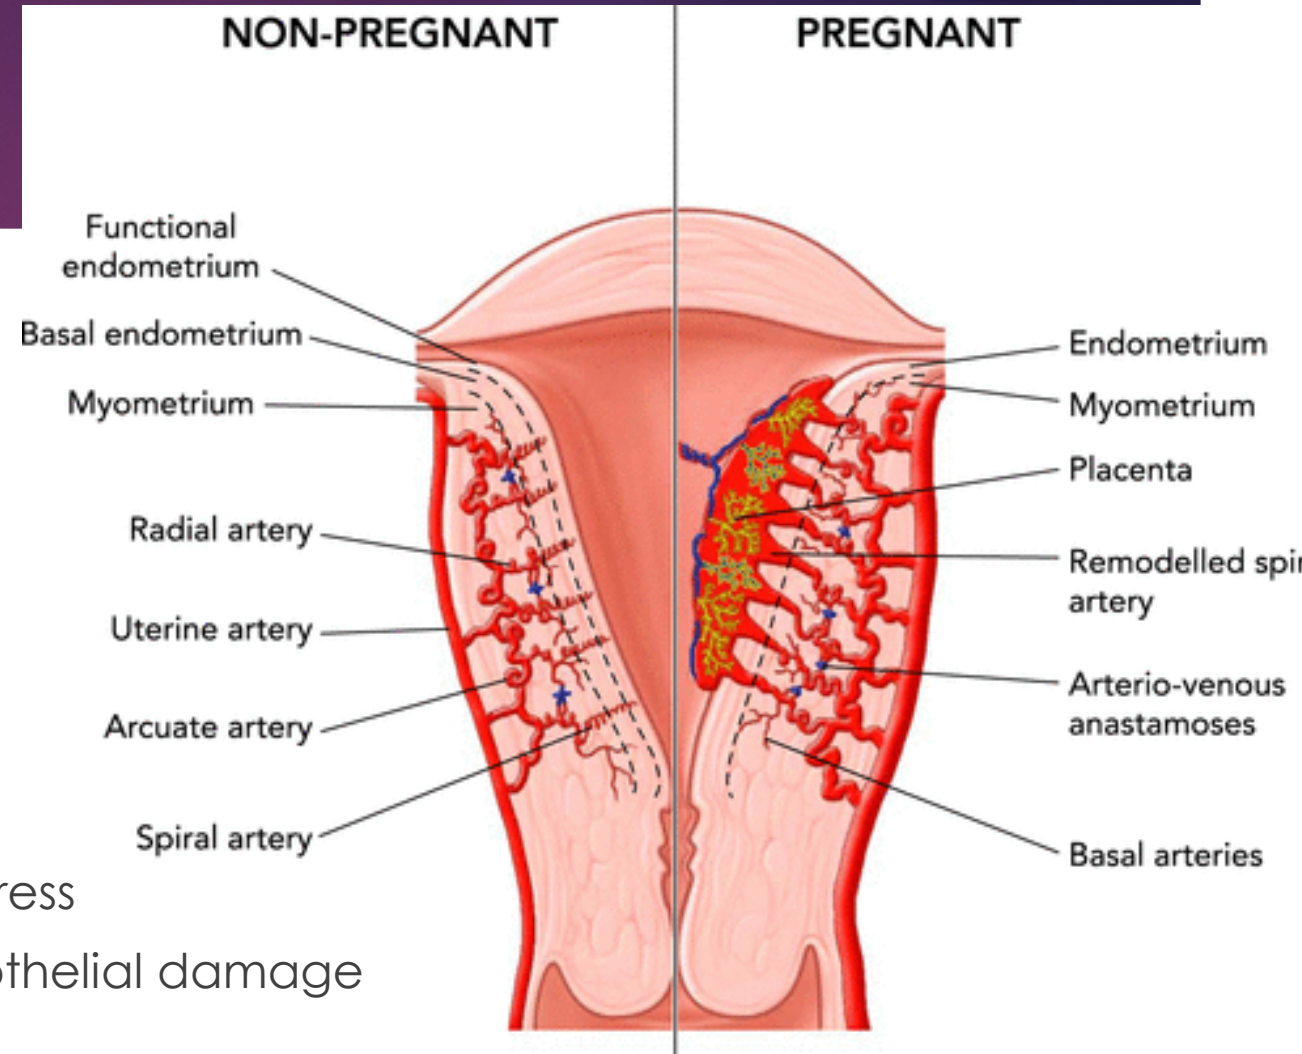

arterial  
hypertension

# PET screening Pathogenesis

- ▶ First wave placentation 8 weeks
  - ▶ Spiral arteries in decidua
- ▶ Second wave 14-18 weeks
  - ▶ Spiral arteries in myometrium
- ▶ Reduced perfusion leads to oxidative stress
- ▶ Trophoblast derived factors cause endothelial damage

# PET screening

## What is involved?

- ▶ Performed at 11-13 weeks
  - ▶ MAP (increased)
  - ▶ PIGF (decreased)
  - ▶ PAPP-A (decreased)
  - ▶ Uterine artery dopplers (pulsatility increased)
- ▶ Predicts
  - ▶ 90% early PET <34 weeks
  - ▶ 75% preterm PET <37 weeks
  - ▶ 45% term PET >37 weeks
- ▶ High risk = >1:100 <37 weeks

# PET screening Prevention

## ▶ Aspirin

- ▶ ASPRE trial: Use of aspirin was associated with a 62% reduction in the incidence of preterm PE and 82% reduction in the incidence of PE at <34 weeks' gestation.
- ▶ 150mg po nocte prior to 16weeks

## ▶ Calcium

- ▶ In deficient women can reduce risk by 50%

# Safer baby bundle smoking

- ▶ Significant contributor to stillbirth and fetal growth restriction (+miscarriage, PTB, congenital anomalies)
- ▶ CO -> reduced oxygenation
- ▶ Nicotine -> vasoconstriction
- ▶ QUIT
  - ▶ “5A's” (Ask, Advise, Assess, Assist and Arrange) brief intervention model
  - ▶ CO monitoring
  - ▶ Offer support including Quitline
  - ▶ Nicotine replacement is better than smoking

# Safer Baby Bundle

## Side sleeping

- ▶ Side sleeping after 28 weeks (recommended from 20 weeks) can half the risk of stillbirth
- ▶ Reduced uteroplacental flow due to compression of major vessels
  - ▶ 85% reduction in vena-caval diameter and around 30% compression of the aorta

# Safer Baby Bundle

## Reduced fetal movement

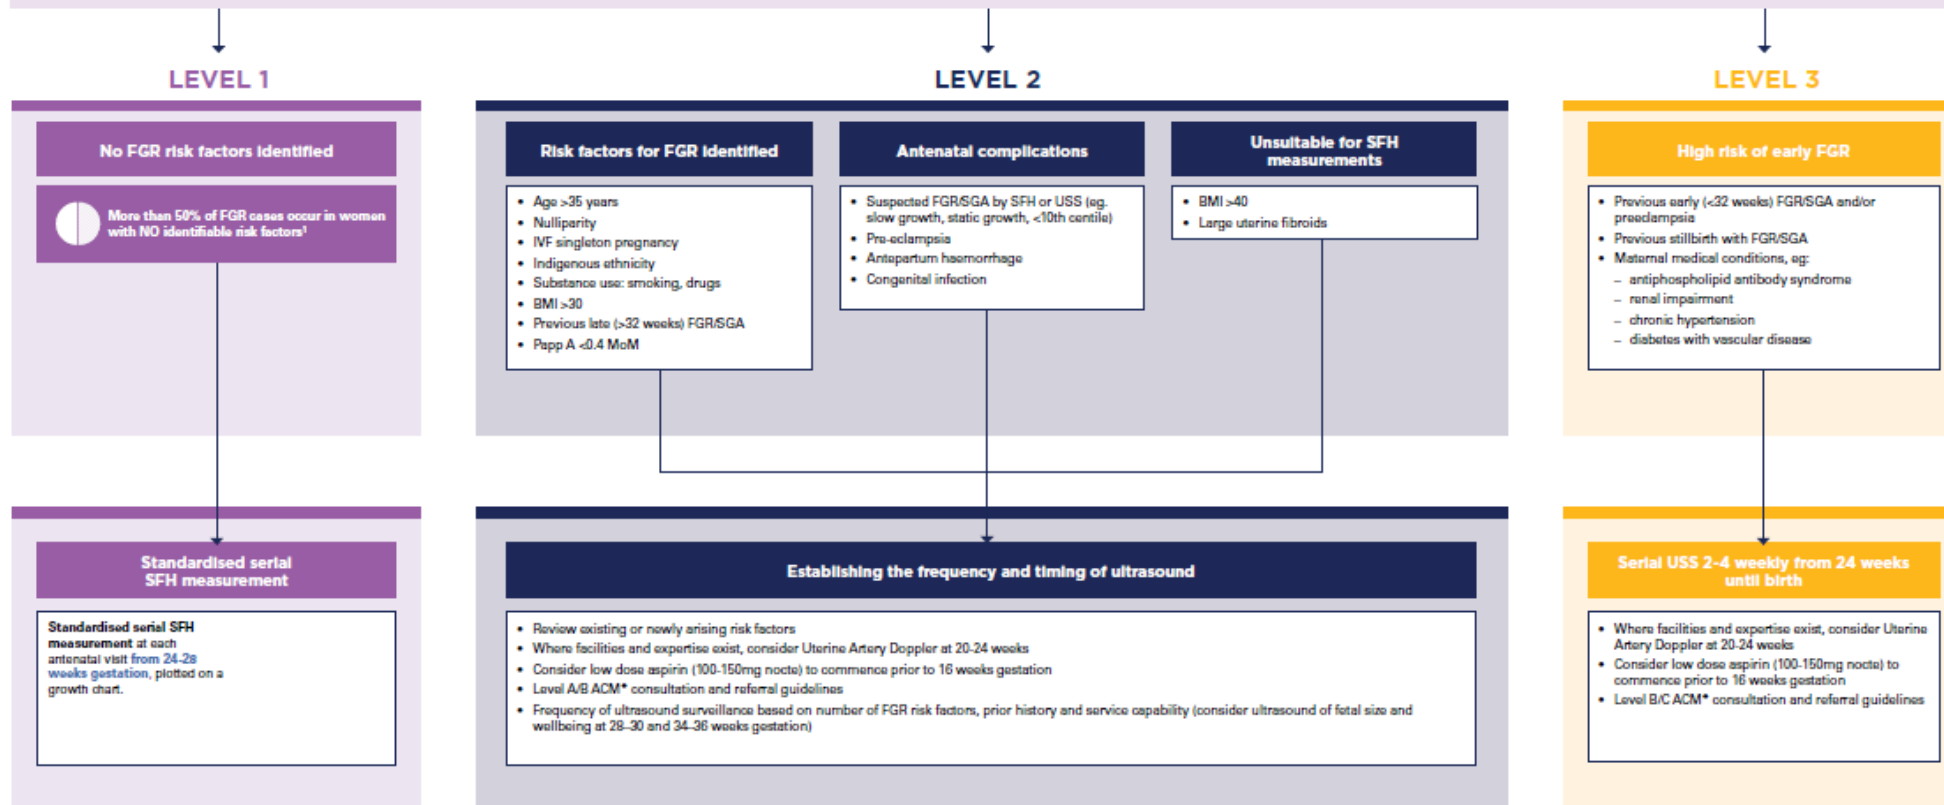

- Around 50% of women who had a stillbirth reported a slowing or no fetal movements just prior
- Fetal movement should continue in the same pattern throughout pregnancy – babies do not move less in the 3<sup>rd</sup> T
- Women who are concerned should contact the D/Suite ASAP
  - Clinical assessment
  - CTG
  - Kleihauer
  - Ultrasound
  - Birth planning

# Fetal Growth Restriction (FGR) Care Pathway

for singleton pregnancies

## RISK ASSESSMENT IN AUSTRALIA FOR FGR AT BOOKING AND AT EACH ANTENATAL VISIT

\* Australian College of Midwives. A copy of the guideline can be accessed here: <https://www.midwives.org.au/resources/national-midwifery-guidelines-consultation-and-referral-3rd-edition-issue-2-2014>

1. Isabelle M, Béatrice B, Anne E, Monique K, François G, Jennifer Z. Does the Presence of Risk Factors for Fetal Growth Restriction Increase the Probability of Antenatal Detection? A French National Study. Paediatric and Perinatal Epidemiology 2016; 30(1): 46-55.

Adapted by PSANZ/Stillbirth CRE 2018 from Royal College of Obstetricians and Gynaecologists. The Investigation and Management of the Small-for-Gestational-Age Fetus, 2013. Maternal/paternal SGA, low fruit intake and excessive daily exercise are not readily ascertainable.

## LEVEL 2

### Risk factors for FGR Identified

- Age >35 years
- Nulliparity
- IVF singleton pregnancy
- Indigenous ethnicity
- Substance use: smoking, drugs
- BMI >30
- Previous late (>32 weeks) FGR/SGA
- Papp A <0.4 MoM

### Antenatal complications

- Suspected FGR/SGA by SFH or USS (eg. slow growth, static growth, <10th centile)
- Pre-eclampsia
- Antepartum haemorrhage
- Congenital infection

### Unsuitable for SFH measurements

- BMI >40
- Large uterine fibroids

### Establishing the frequency and timing of ultrasound

- Review existing or newly arising risk factors
- Where facilities and expertise exist, consider Uterine Artery Doppler at 20-24 weeks
- Consider low dose aspirin (100-150mg nocte) to commence prior to 16 weeks gestation
- Level A/B ACM\* consultation and referral guidelines
- Frequency of ultrasound surveillance based on number of FGR risk factors, prior history and service capability (consider ultrasound of fetal size and wellbeing at 28-30 and 34-36 weeks gestation)

## LEVEL 3

### High risk of early FGR

- Previous early (<32 weeks) FGR/SGA and/or preeclampsia
- Previous stillbirth with FGR/SGA
- Maternal medical conditions, eg:
  - antiphospholipid antibody syndrome
  - renal impairment
  - chronic hypertension
  - diabetes with vascular disease

### Serial USS 2-4 weekly from 24 weeks until birth

- Where facilities and expertise exist, consider Uterine Artery Doppler at 20-24 weeks
- Consider low dose aspirin (100-150mg nocte) to commence prior to 16 weeks gestation
- Level B/C ACM\* consultation and referral guidelines

# Referral pathways

The screenshot displays the Hunter New England Community HealthPathways website. The page is titled "Maternity and Gynaecology Referrals" and is part of the "Women's Health" category. The left sidebar contains a navigation menu with various health topics, including "Home", "COVID-19", "About HealthPathways", "Daily Updates", "Acute Services", "Allied Health Referrals", "Child Health", "Care in the Last 12 Months of Life", "Investigations", "Lifestyle & Preventive Care", "Medical", "Mental Health", "Older Persons' Health", "Therapeutics", "Public Health", "Specific Populations", "Surgical", "Women's Health", "Breastfeeding", "Contraception and Sterilisation", "Gynaecology", "Pregnancy Related Conditions", "Maternity and Gynaecology Referrals", "COVID-19 Changes to Maternity Care", and "Early Pregnancy Assessment". The main content area lists "In This Section" with links to various referral pathways, such as "COVID-19 Changes to Maternity Care", "Early Pregnancy Assessment", "Gynaecological Cancer Referrals", "Acute Gynaecology Referrals", "Non-acute Gynaecology Referrals", "Hysteroscopy Outpatient Service", "Lactation Consultants", "Long Term Contraception Referrals", "Maternal Fetal Medicine Unit", "Maternity Referrals", "Maternity - Urgent Referrals", "Perinatal Education", and "Tongue Tie Release Providers". The right sidebar includes "ABOUT THIS PAGE" information, such as "Contributors", "Page information", and "Topic ID: 38500". The footer contains copyright information and a link to "Terms of Use".

# Referral pathways

The screenshot displays the Hunter New England Community HealthPathways website. The top navigation bar includes the Hunter New England logo, a search bar for 'Search Community HealthPathways', and a menu icon. A left-hand navigation menu lists various health topics, with 'Maternity Referrals' selected. The main content area is titled 'Maternity Referrals' and provides contact information for (02) 6799-2085. It lists four steps for patients: 1. Give patients a copy of blood and scan results to bring to their maternity outpatients appointment. 2. Ask the patient to phone Narrabri Hospital for a maternity booking appointment via (02) 6799-2085. 3. Give patients a copy of blood and scan results to bring to their maternity outpatients appointment. 4. Ask the patient to phone Narrabri Hospital for a maternity booking appointment via (02) 6799-2085. Below this, 'Quirindi HealthOne' is described as a weekly antenatal clinic attended once a month by an obstetrician, located at 50 Nowland Street, Quirindi, NSW 2343. It provides referral instructions: refer to the antenatal clinic by faxing a general practitioner referral letter to (02) 6766-5711 or patient self-referral by phone to (02) 6760-2500. 'Tamworth Hospital' is also mentioned, offering services and models of care. It lists four steps for referral: 1. To refer, fax the Referral for Antenatal Care Form clearly documenting the reason for referral to (02) 4923-6420, with a copy of all available pathology and ultrasound results. 2. Consider referral to the Aboriginal Maternal Infant Health Service by phoning (02) 6767-7699. 3. Give patients a copy of all blood and scan results to bring to their maternity and gynaecology outpatients appointment. 4. Ask the patient to phone the Maternity Clinic for a maternity booking appointment via (02) 6767 7699. A note states that if referring a patient from outside the region, the maternity booking appointment should be made at their local hospital. At the bottom, there are dropdown menus for regional areas: Lower Hunter / Maitland / Cessnock / Dungog, Manning / Great Lakes / Taree, and Newcastle / Lake Macquarie / Port Stephens. A right-hand sidebar contains utility icons (Expand all, Print, Share, Copy) and 'ABOUT THIS PAGE' information, including Contributors, Page information, and Topic ID: 139642.

3. Give patients a copy of **blood and scan results** to bring to their maternity outpatients appointment.

4. Ask the patient to phone Narrabri Hospital for a maternity booking appointment via (02) 6799-2085.

**Quirindi HealthOne**

Weekly antenatal clinic attended once a month by an obstetrician. Location: 50 Nowland Street, Quirindi, NSW 2343.

Refer to the antenatal clinic by:

- faxing a general practitioner referral letter to (02) 6766-5711.
- patient self-referral, phone (02) 6760-2500.

**Tamworth Hospital**

Tamworth Maternity offers these **services** and **models of care**.

- To refer, fax the **Referral for Antenatal Care Form** clearly documenting the reason for referral to (02) 4923-6420, with a copy of all available pathology and ultrasound results.
- Consider referral to the **Aboriginal Maternal Infant Health Service** by phoning (02) 6767-7699.
- Give patients a copy of all **blood and scan results** to bring to their maternity and gynaecology outpatients appointment.
- Ask the patient to phone the Maternity Clinic for a maternity booking appointment via (02) 6767 7699.

If referring a patient from outside the region, the maternity booking appointment should be made at their local hospital.

# Referral

- ▶ Please ensure all antenatal bloods are done +/- dating scan
  - ▶ FBC, group and Ab screen, Rubella, Syphilis, Hep B/C, HIV
- ▶ Referral is triaged by MW
- ▶ Booking visit usually around 14 weeks
- ▶ First visit around 20-22weeks (COVID changes)
- ▶ High risk patients earlier where indicated
- ▶ Current COVID changes to visits

# Other early pregnancy concerns

- ▶ Medications
  - ▶ Epilepsy
  - ▶ Depression
  - ▶ Rheumatological
  - ▶ Hypertension
- ▶ Obesity
  - ▶ BMI >50-> go to JHH
  - ▶ Encourage no weight gain or weight loss
  - ▶ Significant risks to mother and baby
- ▶ Asthma management
