

MasterMind: Cluster Management and Preparedness

Presented by HNECCPHN staff:
Catherine Turner
Sandra Fitzgerald
Renee Wood

Date: 28th July 2020

Learning Objectives

- Understanding how the PHN can support you through COVID 19
- Identified priority actions for pandemic preparedness
- Review and implement systems to identify gaps

PHN Overview

Refining our emergency response and support
eoc@hneccphn.com.au

PPE requirements

- Masks

- Alternate suppliers

- Purchased equipment to enhance supplies

Webinars – 11 COVID updates, plus multiple others on related topics

RACF preparation – keen to have assistance with highlighting issues of concern

Telehealth

Outbreaks – one off grants for additional access

hneccphn.com.au

Healthy People | Healthy Communities

Capacity Tracker

Capacity Tracker is an online tool where a Residential Aged Care Facility, General Practice or Aboriginal Medical Service can provide real-time data to help the PHN to identify issues early and help them better manage workforce and service capacity issues during the COVID-19 pandemic.

It enables providers to share their current status and issues easily and quickly. It is fast, secure and completely free, as it is funded by HNECC PHN, and it all works online.

To register, go to <https://au.capacitytracker.com/> and select Register.

Why use Capacity Tracker?

Capacity Tracker allows General Practices to record the “real time status” of:

- Mask supply
- Workforce
- COVID:19 impacts
- Telehealth capability

Business Continuity

Last updated: 21 July 2020

Background

[About novel coronavirus \(COVID-19\)](#)

Assessment

1. Prepare your practice.
2. Consider using new [temporary MBS telehealth services](#) for consultations where it is safe and clinically appropriate.
3. Perform a risk assessment and triage for all patients to identify those who meet the current:

Self-quarantine or home isolation criteria

Patients must self-quarantine at home for 14 days since last travel or exposure, even if they have a negative COVID-19 test result, if they have been:

- identified as a [close contact](#) of a person with confirmed COVID-19.
- in [Victoria](#).
- in a [specified location in NSW](#).
- overseas in the previous 14 days.

[Home-isolation](#) is also required for:

- suspect cases while awaiting COVID-19 test results.
- confirmed cases until released from isolation by a Public Health Unit or medical practitioner.

COVID-19 Practice Management

Last updated: 20 July 2020

Coordination

- Appoint a practice pandemic leader and co-ordinator who will monitor the situation and communicate important updates.
- Make sure all staff receive clear communication and training, and have regular debriefing opportunities.

Infection control

See:

- the Clinical Excellence Commission website for current COVID-19 [infection prevention and control](#) and [PPE](#) guidance.
- [NSW Health – Amber Alert: Moderate Transmission](#) (mask guidance for NSW Health workers and patients, 24 July 2020) and corresponding RACGP advice

[Practice set-up](#)

[Staff behaviours](#)

- Infection control and PPE
- Posters and resources for the practice and patients
- Care delivery:
 - Controlling access to the practice
 - Protecting vulnerable patients
 - Managing and protecting staff
- Guidance to staff around work attendance, isolation and testing if unwell or at risk

Return to work following negative COVID-19 test

[NSW Health recommends](#) any healthcare workers, staff, students and volunteers with respiratory symptoms, unexplained fever or loss of taste or smell should be tested for COVID-19 and:

- must immediately self-isolate and follow [home isolation guidance for people suspected to have COVID-19](#).
- If the COVID-19 test is negative follow [NSW Health release from isolation guidelines](#):
 - Remain in isolation if the person is within 14 days isolation period after recent travel (overseas, [Victoria](#) or [specified locations in NSW](#)) or they are a close contact of a person and are within 14 days isolation period after their last contact with that person
 - People with respiratory symptoms who have a negative COVID-19 test should remain at home and apply good hand and respiratory hygiene until symptoms have resolved.

COVID-19 Referrals

Testing ^

1. Check if the patient meets the [current testing recommendations](#) . Use clinical judgement to arrange testing for patients presenting with other [symptoms associated with COVID-19](#) .
2. If severe symptoms suggestive of pneumonia e.g., fever and breathing difficulty, or frequent, severe, or productive coughing episodes, refer to the [emergency department](#) for specimen collection using contact and airborne precautions, and phone ahead to let them know that the patient is coming.
3. For mild illness, if the general practitioner is not confident to collect specimens, consider private and public options below. For paediatric patients, advise parent of [testing options based on patient age](#) .

Private 

Public 

All public [emergency departments](#) in Hunter New England Local Health District can test for COVID-19.

To follow-up on test results from public emergency departments and HNELHD COVID-19 clinics:

- Patients can register at the [NSW Health Pathology COVID-19 SMS results service](#)  to receive their COVID-19 test result by SMS.
- General practitioners can phone the Pathology Customer Service Team on (02) 4921-4000.

4. Advise the patient regarding infection control measures, and [monitoring for symptoms and self-isolation](#) .
5. [Serological testing](#)  is generally not recommended for acute diagnosis of COVID-19.
6. For more information, see:
 - NSW Health Pathology – [COVID-19 Testing Information](#) 
 - NSW Health – [Clinical Advice on Self-collection of Swabs for COVID-19 Testing](#)

COVID-19 Telehealth

COVID-19 Telehealth

Last updated: 22 July 2020

This page is about telehealth consultations during the COVID-19 pandemic.

See also:

- [COVID-19 MBS Telehealth Services](#)
- [Coronavirus \(COVID-19\) Telehealth and Consultations in GP Respiratory Clinics](#)
- [MBS Changes Factsheet: COVID-19 Temporary MBS Telehealth Services \(20 July 2020\)](#)

Clinical editor's note

Be aware of the [legislative changes](#) active from 20 July 2020. These changes restrict telehealth to patients who have been seen face-to-face in the previous 12 months by the same clinic. Exemptions include:

- children aged < 12 months.
- persons experiencing homelessness.
- patients being cared for by an Aboriginal Community Controlled Health Service.
- people residing in areas where additional public health restrictions apply.

Approved Medical Deputising Services of a person's usual general practitioner have the same parameters. The new restrictions do not apply to urgent after-hours attendances during unsociable hours.

See the [RACGP FAQ document](#) and [MBS Changes Factsheet: COVID-19 Temporary MBS Telehealth Services \(20 July 2020\)](#).

An HNECCLHD GP triage tool is available.

Assessment

New temporary telehealth item numbers have been created in response to the COVID-19 pandemic.

1. Determine eligibility. The new [temporary MBS telehealth items](#) are available to providers of telehealth services for a wide range of consultations.
2. Ensure that telehealth consultations are covered by your individual and practice professional indemnity plans.
3. Confirm the patient's contact details, and consider the patient's suitability for a [telehealth consultation](#):
 - [Clinical appropriateness](#)
 - The need for [support people](#)
4. Consider pre-screening for patients who may be infectious using the [Healthdirect coronavirus symptom checker](#) or a triage tool.
5. Consider equipment and technology requirements for [video](#) and [telephone](#) consultations. See Australian Telehealth

Scenario Planning Tool:

Is your General Practice prepared for an emergency?

- Assist general practices to plan for, respond to, and recover from the impacts of emergencies and disasters
- Identify areas for improvement in your systems
- Consideration on review of pandemic planning and emergency response

7. STAFF AND DIRECT IMPACT WITH EMERGENCY RESPONSE

POTENTIAL SCENARIOS COULD INCLUDE:

- General practice staff become ill during pandemic/emergency

QUESTIONS TO CONSIDER IN THIS SCENARIO:

a) Does your practice have a pandemic plan?	
b) Does your practice have a dedicated infection control coordinator?	
c) Could your practice employ extra staff through coordinating with staffing agencies or nearby practices?	
d) Does your practice have pandemic staff policies in place that highlight risk to staff?	
e) Does your staff have a surge workforce plan?	
f) Does your practice participate in the Primary Health Network's Capacity Tracker program?	
g) Does your practice have the capacity for your GP's to work remotely from home?	
h) Does your practice administration know how to manage a remote practice?	
i) Are your GP's confident with the correct telehealth billing requirements?	
j) Is your practice able to maintain a 50% face to face appointment ration to ensure Quality Improvement Practice Incentive Payment double payment?	
k) Does your practice have income security in place to ensure the viability of the practice beyond the current crisis?	

POTENTIAL CAUSES:	POTENTIAL IMPACTS:
<ul style="list-style-type: none"> • Practice does not have a pandemic plan • Practice does not have a dedicated infection control coordinator • Practice is unable to employ extra staff • Practice does not have a pandemic/emergency staff policy • Staff unable to work from home 	<ul style="list-style-type: none"> • Potential for decreased staff load if staff become ill and potential exposure for other staff to pandemic related illness, resulting in either reduced practice capability or closure of practice • Potential exposure for patients to pandemic related illness, and potential for patients not to be able to receive care if practice is reduced or closed, resulting in poor health outcomes
POTENTIAL MITIGATION STRATEGIES:	ACTIONS:
<ul style="list-style-type: none"> • Ensure correct Personal Protective Equipment use and availability of Personal Protective Equipment • Ensure staff are aware of the early signs and symptoms • Ensure staff are able to receive testing if required • Ensure surge workforce plan is developed. 	

Comments

Adapting to changes in General Practice

Below are a few changes, tips and tricks that have been implemented:

- Make sure one person is not the holder of all the information.
- Updating policy for staff who may have to self- isolate or quarantine, covering clinical and HR.
- Setting up reciprocal practice relationships in the event of staff shortages or practice closure.
- Turning off phones and shutting doors over lunch period to give staff a break or debrief.
- Triage twice and procedures set up for updating staff and patients e.g. morning check ins.
- Increasing frequency and standard of cleaning measures.
- Testing remote access for clinicians.
- Training and buddying for donning and doffing of PPE (including admin).

Surgical Masks
