What was the problem?

• COVID-19 is of particular concern in the aged care population and is likely to contribute to considerable increase in mortality and morbidity within aged care facilities.

• OBJECTIVES

- Minimise outbreaks in residential aged care facilities
- Assist RACFs to plan, prepare, detect and respond to COVID-19 outbreaks in their facility
- Formulate a plan to source medical equipment, staffing and consumables for RACFs to address identified gaps

What was the plan?

- HNECCPHN & HNELHD came together to plan the RACF Preparedness Support Strategy for COVID19
- Identified who needed to be involved in group to form the governance
- Identified the multiple high level risks
- Project plan was developed, monitored and implemented
- Brain stormed and researched how to mitigate these risks
- Strategy group meet weekly to monitor progress and escalate barriers

What did we do? And why it worked

- Building on existing relationships
- Weekly online meetings with RACFs
- Forging new relationships
- Capacity Tracker

What did we do? And why it worked

- HealthPathways existing governance
- Commissioned education resources
- Aged Care Webinars updates with current advice
- Outbreak Management Plans

Clinical management of COVID patients

- Very few patients have needed hospital admission
- Those that need clinical review have for the most part been managed by their GPs, with support from Gosford Hospital Infectious Diseases and the PHU
- Health Pathways update for Central Coast in progress
- Release from isolation
 - Current recommendation for release is based on clinical

What were the outcomes: not necessarily expected

- Increased use of Telehealth
- New relationships
- New opportunities to continue to work together
- Community of Practice (CoP)
- Networks
- Cross learnings
