# Dementia Demystified Session 2

Drs Pete Silberberg, Steph Daly, Rebecca Moore DTA GP Clinical Educators

## Acknowledgements

DTA – funding further development and delivery of workshop

Dr Allan Shell (Dementia Collaborative Research Centre NSW)

Prof Andrew Robinson (School of Health Sciences UTAS, Wicking Dementia Research and Education Centre)

Dr Amanda Lo (Senior Lecturer, UTAS)

# By attending this workshop the participant will be able to:

- Review the various frameworks available to assist in making a diagnosis of dementia
- Deliver the "gift" of a diagnosis of dementia more confidently
- Initiate post diagnostic care through applying the stages and domains frameworks

# Take home messages

## To begin with the end in mind

- For most people with dementia the GP can both diagnose and initiate care for them
- A timely diagnosis of dementia improves outcomes for both people living with dementia and their carers
- Despite there being no curative treatments for dementia there are interventions that can improve quality of life

## Domains of Dementia

- 1. Cognitive decline
- 2. Functional decline
- 3. Psychiatric symptoms
- 4. Behaviour changes
- 5. Physical decline

Based on work of Dr Jane Tolman, geriatrician, Hobart

## Stages of dementia

### Stage 1: Still at home

- Short-term memory loss with repetitive questions
- Loss of interest in hobbies and previously enjoyable activities
- Impaired instrumental functions

### Stage 2: Escalating care needs, transitioning to 24-hour care

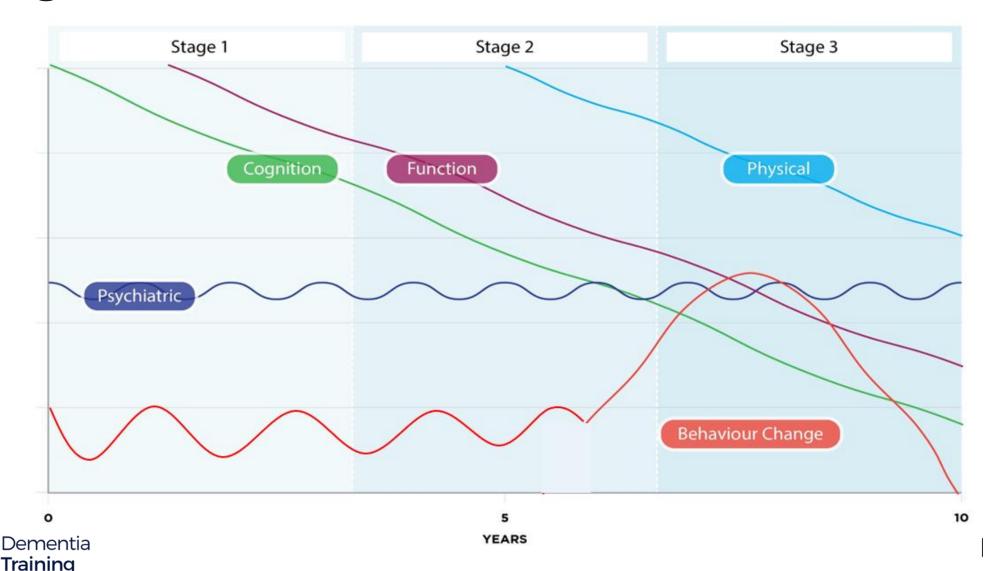

- Progression of cognitive deficits
- Declining function
- Behaviour changes

## Stage 3: Diminishing quality of life

- Increasing loss of independence: dressing, feeding, bathing
- Responsive behaviours
- Physical decline

# Stages and domains of Alzheimer's dementia

Australia

# Framework for diagnosis of Alzheimer's and Vascular Dementia

## Four Inclusion Criteria:

- 1. Gradual onset of poor memory
- 2. Worsening of memory problem
- 3. Failure of function
- 4. Cortical dysfunction dysphasia, agnosia, dyspraxia (for vascular dementia, add neuro sign or CT evidence of vascular incidents)

# Framework for diagnosis of Alzheimer's and Vascular Dementia

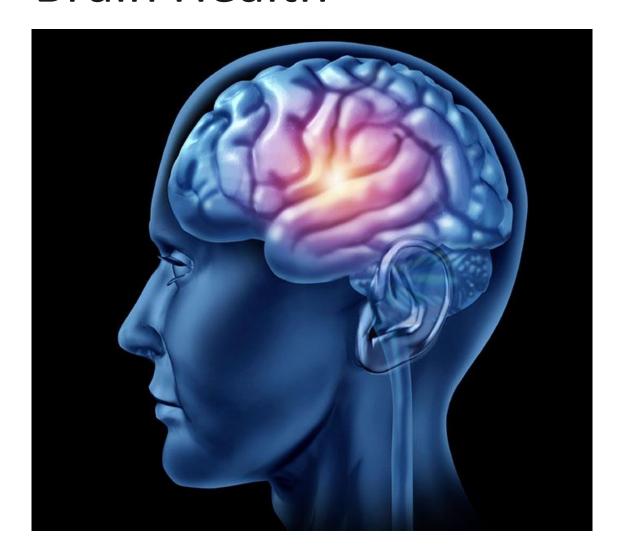

## Three Exclusion Criteria:

- 1. Delirium
- 2. Other organic cause (including drugs)
- 3. Psychiatric illness

Based on work of Dr Jane Tolman, geriatrician, Hobart

## Brain Health

"Contributions to the risk and mitigation of dementia begin early and continue throughout life, so it is never too early or too late"

**Lancet Commission 2020** 

## **Lancet Commission Report 2020**

## Early life <45

education

### **Mid life 45-65**

- Hearing loss
- Hypertension
- Traumatic Brain Injury
- Obesity
- Alcohol

### Late Life >65

- Diabetes
- Depression
- Air pollution
- Social isolation
- Smoking
- Physical activity
- Sleep, Diet

Dementia risk reduction strategies target:

- Population
- Individual

## What is a brain health check?

## Any opportunity to:

- promote and optimise an individual's brain health at any age
- identify patients at risk of dementia, specifically in midlife
- utilize an evidence-based tool to establish any personal risk factors that can be modified to reduce overall risk of, or delay the onset of dementia
- engage in motivational interviewing/shared decision making to assist an individual to reduce their risk of dementia

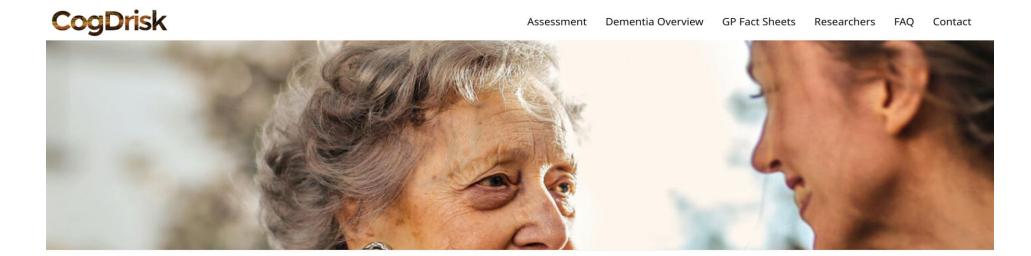

## Opportunities within MBS

- No specific MBS item numbers
- >30 years: Heart Health Checks
- 45-49 year: can provide an opportunity to perform a brain health check
- 40-49 year: Individuals, if at high risk of Diabetes type 2, may undergorisk evaluation
- >75 year: Annual health assessments
- Annual health assessments
  - Aboriginal and Torres Strait Islander
  - Living in a RACF
  - Living with an intellectual disability

# If you identify anyone at risk?

### Cognitive Health and Dementia Risk Assessment

CogDrisk uses the latest evidence to help you understand your dementia risk profile. The assessment gives you a personalised report that you can discuss with your doctor and takes approximately 20 minutes to complete.

# Let's meet Anna again

- Anna is a 75 year old widow
- She lives by herself
- Normally attends on her own
- Attends for fluvax with daughter Sophie
- PMH- Hypertension, OA knee
- Meds- Perindopril, paracetamol

# Let's meet Anna again

- Examination normal for age
- Blood tests and CT brain normal for age
- MMSE score 23
- Dysphasia and agnosia present
- Geriatric depression score normal

# Anna met the Four Inclusion Criteria for a diagnosis of Alzheimer's Dementia

### **Four Inclusion Criteria:**

- 1. Gradual onset of poor memory memory poorer than previously
- 2. Worsening of memory problem increasingly forgetful, getting worse
- 3. Failure of function gardening, cooking, socialising
- 4. Cortical dysfunction dysphasia, agnosia, dyspraxia

## Anna had none of the Exclusion Criteria

### **Three Exclusion Criteria:**

- 1. Delirium
- 2. Other organic cause and /or drugs
- 3. Psychiatric illness

# Offering the (gift of a) diagnosis

# Stages of dementia

## Stage 1: Still at home

Goal of care – Maintain dignity independence and safety

## Stage 2: Escalating care needs, transitioning to 24 hour care

Goal of care – Maintain dignity through safety

## Stage 3: Diminishing quality of life

• Goal of care – Maintain dignity through comfort

Based on work of Dr Jane Tolman, geriatrician, Hobart

# Stage 1 Management: Maintain dignity through independence and enjoyment

- 1. Cognition
- 2. Function
- 3. Psychiatric illnesses
- 4. Behaviour
- 5. Physical decline

# What can be done to help support Anna's cognition?

Problems	Actions
<ul> <li>Forgetfulness</li> </ul>	Medication review
<ul> <li>Short term memory loss</li> </ul>	Cholinesterase Inhibitors
<ul> <li>Repetitive questioning</li> </ul>	CVS risk reduction
<ul> <li>Mild word finding issues</li> </ul>	<ul> <li>Education (including carers)</li> </ul>
<ul> <li>Difficulty with planning and</li> </ul>	Legal affairs
sequencing	Advance Care Planning
	Occupational Therapist
	<ul> <li>understand interests, support mentally stimulating activities, skill training and memory strategies</li> </ul>
	Physiotherapy/Exercise Physiology
	<ul> <li>risk reduction and social connection</li> </ul>
	Speech Pathology
	<ul> <li>communication skills and strategies</li> </ul>

## Medications for dementia

### Cholinesterase Inhibitors

- Donepezil (Aricept), Rivastigmine (Exelon), Galantamine (Reminyl)
- PBS criteria: MMSE ≥10, in consultation with or specialist confirmed diagnosis
- May provide modest benefit in cognitive function, apathy, behaviour
- SE: GI upset (10%), heart block, asthma

## Medications for dementia

NMDA receptor antagonist - Memantine (Ebixa)

MMSE 10-14

Provides modest benefit in:

- reducing carer requirements,
- may delay going to a NH
- limited benefit in cognition

Side effects: confusion, dizziness, drowsiness, headache, insomnia, agitation, hallucinations

Can be used in combination with AChEIs (1x private script)

# Medication review and Anticholinergic load

ACUTE	CHANGE	IN	M(ental) S(tate)
Antiparkinsonian Corticosteroids Urologic (antispasmodics) <sup>[1]</sup> Theophylline Emesis (antiemetics)	Cardiac (antiarrhythmics) H2 blockers (cimetidine) Anticholinergics NSAIDs Geropsychotropic Etoh	Insomnia medications Narcotics	Muscle relaxants Seizure medications

[1]Urologic (antispasmodics) such as oxybutynin or tolterodine

[2] Geropsychotropic medications (such as antidepressants, antipsychotics, sedatives)

# STOPP START Toolkit Supporting Medication Review

An evidence based approach to prescribing in the elderly

### **STOPP:**

Screening Tool of Older People's
Potentially
Inappropriate Prescriptions

### **START:**

Screening Tool to Alert Doctors to
Right
(i.e. appropriate, indicated)
Treatments

### Colour Key

Medication to consider stopping in patients over 65 from the STOPP Tool <sup>1</sup>	L
Medication to consider starting in patients over 65 from the START Tool <sup>1</sup>	Г
National and local guidance e.g. NICE Guidelines <sup>5</sup>	C

https://geri-em.com/wp-content/uploads/2013/05/STOPP START-criteria.pdf

Problems	Actions
<ul> <li>Trouble with cooking</li> <li>Reduced activity in garden</li> <li>Missing pills</li> <li>Safety in the house</li> <li>Driving?</li> <li>Socially withdrawn</li> </ul>	<ul> <li>OT to help with:</li> <li>Adaptation of environment – reduce clutter, group ingredients, contrasting plates/cups, labelling cupboards</li> <li>Task break down and simplification</li> <li>Safety – safety cut of switch on stove</li> <li>Assistive technologies and strategies – pill dispenser, reminders, calendars, google home pod</li> <li>Carer education to provide support but facilitate to maintain independence</li> <li>Support and strategies to return to social activities</li> <li>Driving assessment</li> <li>Physio/OT: Raised garden beds; physio for OA knee and mobility; gardener for larger jobs</li> </ul>

# Driving and dementia

- It's complicated!
- Have the conversation early
- Minimum: conditional license as per Australian Fitness to Drive guidelines
- Get advice if needed

(reporting state based)

# Driving and dementia

MMSE not a good predictor of driving

However if MMSE <20 then generally should not be driving</li>

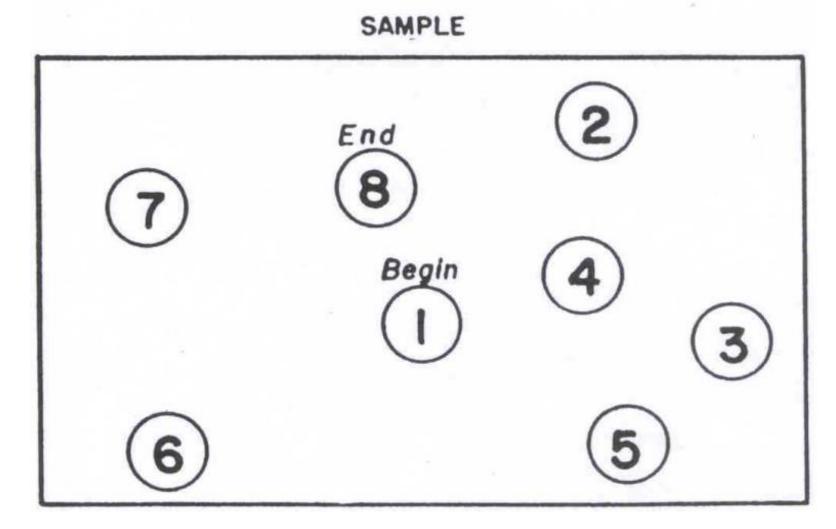

#### Evidence based tests:

- Trail Making Tests A and B
  - Tests processing speed, visuospatial and executive assessment
- Clock drawing test
  - Tests visuospatial and executive function
- Intersecting pentagons
  - Tests visuospatial function

## **Driving and Dementia**

Trail Making A

## **Driving and Dementia**

SAMPLE End Trail Making B Begin

## **Driving OT assessment**

- Rehabilitation opportunity
- Comprehensive
- Off road assessment initially- safer
- Car safety

# What about the <u>psychiatric</u> domain?

<u> </u>		
Problems	Actions	
<ul> <li>Depression</li> <li>Anxiety</li> <li>Hallucinations</li> <li>Delusions</li> </ul>	<ul> <li>Mental Health Screening: for person living with dementia and carers</li> <li>Consider MHCP for both PLWD and Carer</li> <li>Treat any coexisting psychiatric conditions and reevaluate         <ul> <li>Psychologist/Counsellor – for adjustment disorder/depression anxiety – via a MHCP</li> <li>Prescribing antidepressants</li> </ul> </li> <li>Delirium action plan</li> <li>Ongoing family education</li> <li>Support to engage in social/stimulating activities</li> </ul>	

## **Delirium action plan**

Delirium is a sudden inability to think clearly and pay attention. It is common among older people. Delirium can be a sign of a serious underlying medical problem. **If you notice any sudden changes, think of a delirium episode.** Prompt medical attention may help to prevent a hospital admission.

#### What to look out for

Delirium can develop quickly, usually over hours or days. A person with delirium may:

become confused and forgetful

become unable to pay attention

become different from their normal selves
become either very agitated or quiet and

become unsure of the time of day or where they are

have garbled or confused speech

have difficulty following a conversation

have changes to their sleeping habits, such as staying awake at night and being drowsy during the day

see or hear things that are not there, but which are very real to them

lose control of their bladder or bowels

#### What causes delirium?

Delirium can have many causes. Most commonly it is caused by:

- · infection
- strong pain
- constipation
- medicines
- · dehydration

#### ,

## Further advice? healthdirect 1800 022 222

Speak to a registered nurse or doctor 24 hours a day, 7 days a week to get health advice you can trust. This is a free service.

#### What can family and carers do?

If you notice signs of delirium call the patient's GP immediately and tell the practice you suspect delirium and request an urgent appointment that day.

#### Patient contacts

GP name			
GP practice			
Phone			
Local hospital			
Other family/co	ontacts		

Once the person has appropriate medical care, you can still help care for them.

- Encourage and assist someone with delirium to have enough food and fluids.
- Knowing the time of day can reduce confusion. Remind the person where they are, and what day and time it is.
- It is reassuring for people with delirium to see familiar people. Visit as often as you can and try to be available to help with their care.

# How can we help with <u>behaviours</u>?

Problems	Actions
<ul><li>Agitation</li><li>Frustration</li><li>Apathy</li><li>Social isolation</li></ul>	<ul> <li>Occupational Therapist</li> <li>Problem solving why and working with care partner on skill training and strategies</li> <li>Meaningful activities/social engagement</li> <li>Maintaining a routine</li> </ul>
	<ul> <li>Speech Pathology <ul><li>communication tools &amp; aids</li></ul> </li> <li>Day respite</li> <li>Education- person living with dementia &amp; carers</li></ul>

<ul> <li>Changes to mobility, balance, coordination</li> </ul>	<ul> <li>Physiotherapist/Exercise Physiologist</li> <li>Mobility changes can occur early (can be predictive)</li> <li>In stage 1 can build reserve, prevent falls and frailty and maintain ADL's</li> <li>Additional benefits include maintain cognition, mood and sleep</li> <li>GP</li> <li>Health assessment (over 75)         <ul> <li>Medication review</li> <li>Optimise CVS risk factors</li> <li>Vision</li> <li>Hearing</li> </ul> </li> <li>Dental shock</li> </ul>	

## GP Management Plan: Stage 1 Dementia

DOMAIN	PATIENT PROBLEM	TREATMENT/SERVICES/PATIENT & FAMILY ACTION	ARRANGEMENTS FOR TREATMENTS/SERVICES
Cognition	Forgetfulness Short-term memory loss Repetitive questions	Cardiovascular Risk assessment and management Medication Acetylcholinesterase inhibitors Legal issues such as POA Advance Care Directive Family Education	Dementia Australia Forward with Dementia Practice Nurse – education on dementia General Practitioner Speech Pathologist – language issues Consider use of practice recall/reminder system
Function	Impaired instrumental functions	Family education Encourage maintenance of skills Support with cooking/meal prep Support to attend usual activities Maintain social interaction Driving assessment Home hazards assessment	Dementia Australia Practice Nurse General Practitioner My Aged Care/Care package Dementia outreach service Occupational therapist / OT driving assessment
Psychiatric	Depression Anxiety Hallucinations Delusions Paranoia	Screening of mental health in patient Screening for mental health issues in carers Family education	Practice Nurse General Practitioner Psychologist MHCP Social worker Carer support groups Dementia Australia Dementia Support Australia
Behavioural	Social withdrawal Frustration	Increased social engagement Family education	Practice Nurse General Practitioner Consider family meeting: 3 – 6 monthly Dementia outreach service Dementia Australia – online resources Dementia Support Australia
Physical	Failure to maintain physical health care needs	Home medication review Reduction in cardiovascular risks, as appropriate Exercise assessment Hearing assessment Dental review Continence assessment Falls assessment Immunisation – influenza, pneumococcus, herpes, zoster Family education	Practice Nurse General Practitioner - Consider use of practice recall Pharmacist Community dietician Podiatrist Optometrist Audiologist Exercise physiologist Physiotherapist Occupational Therapist

## Carers as patients

- 30% of carers develop depression
- Physical, social and financial concerns
- Behavioural changes pose the greatest impact
- Spouse feels the most impact
- Home | Carer Gateway
- Dementia Australia

## Carers as patients

### Carers may require

- Education of the illness, trajectory, impact
- Screening mental & physical health
- Assistance respite or transition to RACF
- Strategies to manage behavioural or cognitive concerns

#### CBT for carer

- Reduces impact of care
- Delays RACF
- Improves skills in managing patient behavioural problems

## **Dementia in Practice podcast**

 A podcast made by GPs for GPs and others interested in learning more about dementia

### Selection of Season One & Two episodes:

- Life with dementia: A first-hand account
- Healthy ageing and dementia: How to recognise the difference
- Diagnosing dementia in general practice: A stepwise approach
- A carer's story: When dementia comes home
- The healthy brain check: Reducing risk factors for dementia
- Dementia and multicultural communities: Dementia doesn't discriminate
- Dementia at the end of life: A person centred approach
- Driving and dementia: Who's in the driver's seat
- Looking at residential aged care: Living the best life possible
- Sleep Matters

### New series coming soon
